## **Environmental Health and Safety Software Upgrades Coming this Spring**

UCF's Environmental Health and Safety department is upgrading the existing software Environmental Health & Safety Assistant (EHSA) with more functionality with a single sign-on. The EHSA upgrade will take place tentatively **March 2023**.

To allow for a better experience and seamless transition, EHS will work with stakeholders from university committees to test the software.

If you would like to volunteer to test the software, please do not hesitate to reach out to [ehs@ucf.edu](mailto:ehs@ucf.edu). Your feedback is greatly appreciated.

### **About the Upgrade:**

The EHSA upgrade includes the following modules: Chemical Safety Assistant, Biological Safety, Radiation Safety, Training, Inventory, Equipment, Waste Management, and Medical Surveillance.

### **About the Software:**

EHSA is used by the office of Environmental Health & Safety, Principal Investigators, Facilities personnel, Laboratory workers, Students, Staff, and Volunteers.

The software delivers the tools needed to track and report materials, equipment, inspections, personnel, and regulatory requirements. It includes documentation concerning the use of materials, waste disposal, training records, inventory, calibration records and locations.

For more information, please contact EHS at [ehs@ucf.edu](mailto:ehs@ucf.edu).
